

Python Basics

Python code

```
assignments > python basics.py > ...
1  #print
2
3  Name=input("enter your nmae: ")
4  Age=input("Enter your Age: ")
5
6  print("User Name is: ", Name)
7  print("User Age is: ", Age)
```

output

```
(base) PS D:\ML> & C:\ProgramData\an
enter your nmae: abhay
Enter your Age: 21
User Name is:  abhay
User Age is:  21
```

Arithmetic Operation

Python code

```
#arithmetic operation

a=13
b=6

add= a+b
sub= a-b
mul= a*b
mod= a%b
exp= a**b
fdiv= a//b

print("Addition value is: ",add)
print("Subtraction value is: ",sub)
print("Multiplication Value is: ",mul)
print("modulo value of a and b is: ",mod)
print("floordivision of a and b is: ",fdiv)
print("exponentioal result is: ", exp)
```

output

```
Addition value is: 19
Subtraction value is: 7
Multiplication Value is: 78
modulo value of a and b is: 1
floordivision of a and b is: 2
exponentioal result is: 4826809
(base) PS D:\ML>
```

<pre> #arithmetic operation a=5 b=8 add= a+b sub= a-b mul= a*b mod= a%b exp= a**b fdiv= a//b print("Addition value is: ",add) print("Subtraction value is: ",sub) print("Multiplication Value is: ",mul) print("modulo value of a and b is: ",mod) print("floordivision of a and b is: ",fdiv) print("exponentioal result is: ", exp) </pre>	<pre> Addition value is: 13 Subtraction value is: -3 Multiplication Value is: 40 modulo value of a and b is: 5 floordivision of a and b is: 0 exponentioal result is: 390625 </pre>
